PowerShell cmdlets and functions can't do everything

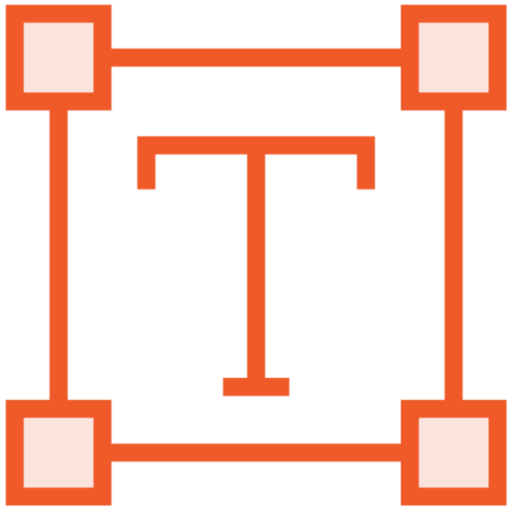

Format, manipulate, parse, or process data

Fill in a gap

Polish a PowerShell expression

Common Object Types

Strings

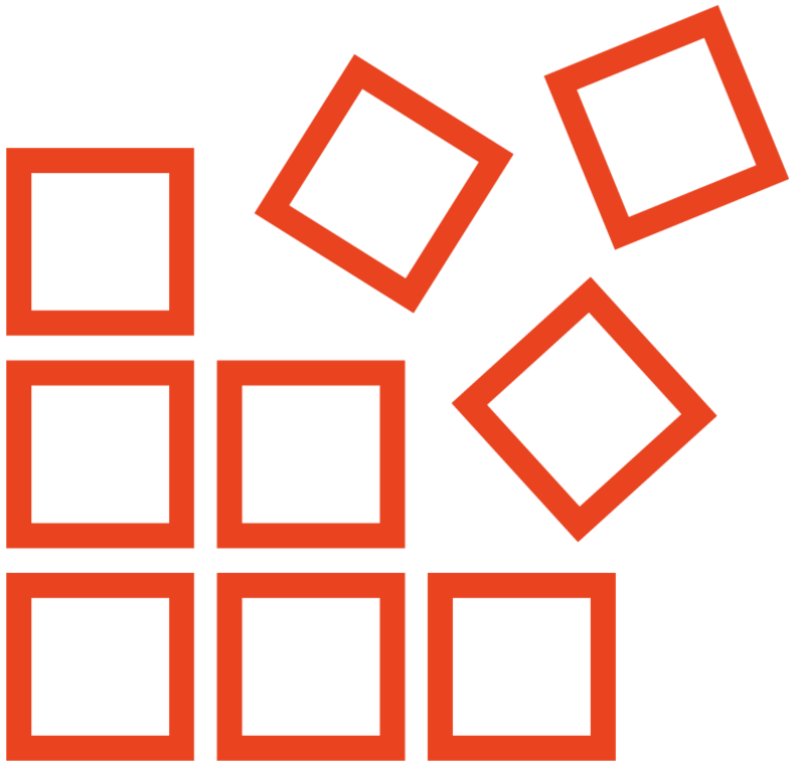

Dates

Numbers

Use Get-Member to discover methods and properties

Take advantage of parenthetical expressions

Leverage dotted notation

- You can combine methods and properties

Combine PowerShell operators

You might use these techniques more often in scripting

Common String, Date, and Number Techniques in Windows PowerShell

Next Steps

Learning Windows PowerShell is like learning a foreign language

- Master syntax, rules, and grammar
- Repetition is critical

Always be thinking “objects” in the pipeline

- If you can do it for one thing, you can do it for 10, 100, or 1000 things

Use PowerShell remoting commands

Lay the foundation for PowerShell scripting

Read, Discover, Imagine, Try, Repeat
